

# Java Enterprise Edition

Fall Semester 2020

Instructor: Zhuanyshev Ilyas

## HOME TASK 5

### Problem 1

Continue developing your social network – ARALASU.KZ.

Now, you will add "posts" module into application. Create table in database, called - posts:

```
posts(  
    id – int(11)  
    authod_id – int(11) - foreign key with table users.id  
    title – text  
    short_content – text  
    content – text  
    post_date – timestamp  
)
```

So, in main "feed page", you will have a list of all posts, added by users, and sorted by posted date in descending order.

You must be able to see only own posts by clicking into "My Posts" tab in main header menu.

You can add new post by inserting post data. Use **tinymce** plugin as an editor for textarea. It is an open source javascript plugin for styling text before adding them into database.

Link: <https://www.tiny.cloud/>

Please, use 4<sup>th</sup> version of TinyMCE, from link: <https://www.tiny.cloud/get-tiny/>

You can download it from link: <https://www.tiny.cloud/get-tiny/custom-builds/>

To initialize TinyMCE, you will add following code into your page:

```
<!DOCTYPE html>  
<html>  
<head>  
    <script src="your-path-to-tinymce/tinymce.min.js"></script>  
    <script>tinymce.init({ selector:'textarea' });</script>  
</head>  
<body>  
    <textarea>HELLO, I am Ilyas Zhuanyshev</textarea>  
</body>  
</html>
```
